

Translation Tool for Rotpunkt Kitchens

Goal:

A browser-based AI application that translates documents from the kitchen industry, taking into account technical terms, product names, and company-specific glossaries. All translations are managed as projects and can be reused or edited later.

1. Project Management

- Create new translation project
- Assign project name
- Save original file
- Manage project status
- Archive project
- Reopen project
- Search and filter projects
- Copy project

2. File Upload

Supported file formats:

- Word (.docx)
- Excel (.xlsx)
- PDF (.pdf)
- InDesign (.indd)

After upload:

- automatic text recognition
- document structure recognition
- language recognition
- project is created automatically

3. Language Selection

- Select source language or detect automatically
- Select target language(s) (translate one or several at the same time)
- Multiple target languages can be prepared

4. Translation Preview

After clicking "Start Translation" the application first creates only a preview.

Display:

- Left: Original text
- Right: Translation

5. Term Highlighting

Color-coded marking of:

- Kitchen technical terms
- Glossary terms
- Ambiguous terms
- Unknown or incorrect terms
- Protected product names / article numbers

When clicking on a term:

- Translation used
- Alternative translations
- Description
- Glossary entry
- Edit directly

6. Manual Editing

Before release, the user can:

- Change texts
- Replace terms
- Add new terms to the glossary
- Add comments
- Regenerate the translation of individual sections

7. Glossary Management

Separate module. Functions:

- Create terms
- Edit terms
- Delete terms
- Manage synonyms
- Multiple target languages
- "Do not translate" marking
- Import from Excel
- Export to Excel
- Duplicate check
- Versioning
- Release status

8. Quality Check

Before release, the system checks for:

- Unknown technical terms
- Missing glossary terms
- Contradictory translations
- Untranslated texts
- Formatting problems

Warnings are displayed.

9. Final Release

Only after clicking "Release Translation" is the final translation generated.

10. Export

Export as:

- Word
- Excel
- PDF
- For the Excel export, there should be a function (Advanced Settings). Here it should be possible to freely define the columns for the source language and target language
- Templates for export could possibly be set up?

Options:

- Translation only
- Original + Translation
- Review report
- Comments

11. Project History

Every released translation is saved.

Saved:

- Original file
- Preview
- Final translation
- Export files
- Editor
- Date
- Glossary version
- Number of changes
- Project status

12. Search

Search by:

- Project
- File name
- Customer
- Language
- Terms
- Editor
- Time period

13. User Management

Roles:

Translator

- Create projects
- Translate
- Edit

Reviewer

- Check translations
- Release

Administrator

- Users
- Glossary
- Settings
- Permissions

14. Dashboard

Display:

- Open projects
- Projects under review
- Processed today
- Recent translations
- Frequently used glossary terms
- Statistics

15. Settings

- Translation language
- Default export
- Colors
- Glossary management
- AI model
- Users
- Permissions
- API interfaces (e.g. DeepL)

16. Browser Application

- Installation on a central web server
- Access via browser
- No local installation required
- Multiple users at the same time
- Responsive interface
- Modern user interface

17. Planned Workflow

New project → Upload file → Select language → Start translation → Generate preview → Highlight technical terms → Apply glossary terms → Manual correction → Quality check → Release → Export (Word / Excel) → Project is archived

Extensions for Later Versions (Phase 2)

- AI-supported translation suggestions based on previous projects (Translation Memory)
- Support for additional file formats (e.g. PowerPoint, XML, CSV, InDesign)
- Multilingual glossaries with a release workflow
- Automatic detection of new technical terms and suggestions for glossary expansion
- Version comparison between translations

- Role-based release processes with notifications
- Statistics and evaluations (e.g. translation volume, frequent corrections, glossary usage)
